PRINTED IN JAPAN Z15121-2 2000-2

Equipped with "Super Joint System - SJS" and Electronic Limiter

Electronic speed controller (for model C, CV,CVL)

For keeping constant rotation speed even under loaded condition, and for soft start.

Tough cord guard

Excellent in flexibility to protect power supply cord from disconnection.

Speed control dial

For getting optimum rotating speed to suit various work (for model CV,CVL)

Electronic limiter (for model C, CV,CVL)

Stops the electric current when accidental overload on the machine, and protects motor from burning. And when the machine will be freed from the load, restart the motor automatically. At this time, the soft starter functions for suppression of starting shock.

High power & Heavy-Duty motor

1,100W / 1,400W power from slim and compact body thanks to new S60 type motor and electronic control system.

Zigzag, and powdered varnish coating on armature and field ensure effective protection from sharp grinding dust.

"Super Joint System-SJS"

This new system provides following benefits • Smooth and comfortable grinding work

- Suppression of shock by accidental wheel lock during work.
- Prevention of damage on gear coming of accidental wheel lock.

Adjustable wheel cover

adjusted without any tool.

Wheel cover's position can be

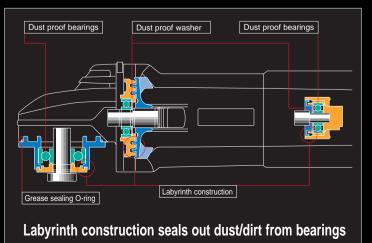

Utilizing such a characteristic of Coil-Spring that an extended Coil-Spring has more tightening force, armature shaft is connected securely to spiral bevel gear with specially designed Coil-Spring.

- Start rotation of armature shaft
- With the rotation of armature shaft, Coil-Spring is extended and its tightening force increases so that armature shaft is fixed irmly and transmitted to spiral

Against the shock by accidental indle lock or overload which signed for the tool, the Coil-Spring will be in slippery condition. This will prevent the damage of gear or armature and assure sr
