# Wi-Fi™ Zoning System

## The Smarter Zoning System with Radiant & Forced Air Control

The Wi-Fi Zoning System offers the highest degree of comfort management, allowing you to control up to 20 zones remotely to maximize comfort and energy savings. The system incorporates multiple heating and cooling modes, DHW, and selectable priorities to accommodate for small to large systems. Each zone can be viewed or configured from your smartphone or tablet devices, allowing you to control your comfort anytime, anywhere.

The system incorporates a zone control, programmable touch screen and digital thermostats, Wi-Fi communication module and mobile app for Apple® and Android™ devices.

## Radiant and Forced Air System Control

More than a standard zone control, the ZON-0550 has the capability to control up to 4 zone pumps, valves or dampers per module with wireless expansion capabilities for a maximum of 20 zones.

Unique to Hydronics, each zone control provides outputs for air delivery systems to control fancoils, furnaces, and air conditioning units. The zone outputs also allow for humidity control. The THM-0300/500 thermostats only utilize two wires back to the zone control, eliminating the need to pull wire which makes the system ideal for retrofits as well as new installs.

## Get Connected

The HBX Zone App makes comfort easy by allowing you to remotely monitor and adjust targets, schedules, alarms, and modes. The app can accommodate for unlimited amount of thermostats and snow melt controls in one location with the ability to also control several locations on one account.
