

HEAT PUMP PAD™

Heat Pump Pad™

Provides an effective base for heat pump equipment installed in snowy climates. Rather than a combination of a typical 2" (or 3") equipment pad and 6" heat pump risers, the Heat Pump Pad™ provides a full 8" of elevation in a simple square footprint. The star pattern of the integral risers allows for installation of equipment with different size footprints up to 36" x 36". Also included are eight anti vibration pads uniquely designed to fit into the guide slots on the top of the integral risers. The base is sloped outward to allow for easy drainage of condensate or defrost cycle condensate when the outdoor coil is operating in heat pump mode. Nestable for efficient shipping, transportation, and warehousing. Injection molded from concrete gray, recycled polypropylene material, the Heat Pump Pad™ is environmentally friendly and designed to last longer than the equipment it supports. US Patent Number 7,891,635, and other patent(s) pending.

ANTI-VIBRATION PADS

E.V.A. Anti-Vibration Pad

The latest generation in vibration dampening technology. The most effective vibration dampening pad available on the market. The EVA Pad was tested against other pads at four different vibration settings. In the most severe vibration extremes, the EVA Pad outperforms cork and rubber by a margin of greater than 3:1! This is due to the special composite foam center which is much more structurally sound than cork. It is not affected by oils or chemicals that can break down cork and is much more effective at vibration dampening than solid rubber. All this at a very competitive price. Designed to withstand 50 psi.

Rubber Anti-Vibration Pad

Highest quality elastomeric oil resistant padding. Designed to withstand 50 lbs. psi. The rubber pads are corrugated on both sides. Ideal for air conditioners, compressors, cooling towers, presses, machines, etc.

Iso-Cube Economy Anti-Vibration Pad

Natural rubber pads, designed to reduce vibration and noise emanating from refrigeration and air conditioning equipment. The circular design in each pad offers a suction cup effect, which eliminates the need to bolt the pads down. A standard 18" (46cm) pad is divided into eighty-one 2" (5cm) segments, each of which may be cut or torn to provide smaller pads. These 50 durometer pads will withstand a load of 180 psi with greater resiliency.
